

### **List of amended claims**

1. (currently amended) A system for duplicating keys for cylindrical locks having wafers therein comprising a basic key reader to be inserted into a cylindrical lock, said basic key reader having a sliding bar reader therein, said sliding bar reader touching any of said wafers to determine a location, depths and spaces of said wafers, the obtained information on said sliding bar can be read in an opening at the head of said key reader, said [reader] bar reader has a bend therein at its outer end to be locked in said opening of said basic key reader so that said [reader] bar reader cannot be lost accidentally.

2. (currently amended) A system for duplicating keys for cylindrical locks having wafers therein comprising a basic key reader to be inserted into a cylindrical lock, said basic key reader having a sliding bar reader therein, said sliding bar reader touching any of said wafers to determine a location, depths, and spaces of said wafers to obtain information which can be read in an opening of the head of said key reader, said [reader] bar reader has a knob at an outer end thereof, said knob and said basic key reader have an identical color thereon.

3. (currently amended) A system for duplicating keys for cylindrical locks having wafers therein comprising a basic key reader to be inserted into said cylindrical lock, said basic key reader having a sliding bar reader therein, said sliding bar reader touching any of said wafers to determine a location, depths, and spaces of said wafers to obtain information, said information being recorded on a code card so as to [the] identify said information with vehicles having identical specification.
